

Unilux Makes its Mark

The **Adam's Mark Hotel**, located in **Charlotte, NC**'s downtown business district is one of the premier centers for hospitality in the region. The 613 individually climate controlled rooms had depended on a Unilux ZF800W-LB for over 20 years.

An unfortunate act by a previous maintenance crew "seal-welding" the tubes of that boiler to the headers eliminated the possibility of tube replacement on the existing boiler. To further complicate the situation, extremely limited access to the basement boiler room created the need to field-erect any new replacement boiler.

The abilities of Unilux to provide a field-erectable boiler and its local representative the only company in North or South Carolina with an "H" stamp for hot water field erect boilers - made it possible to install a new ZF800W-LB in place of the old Unilux. Working hand-in-hand Unilux was able to make its mark by giving its customer the exact product it needed with a minimum of cost and destruction.
